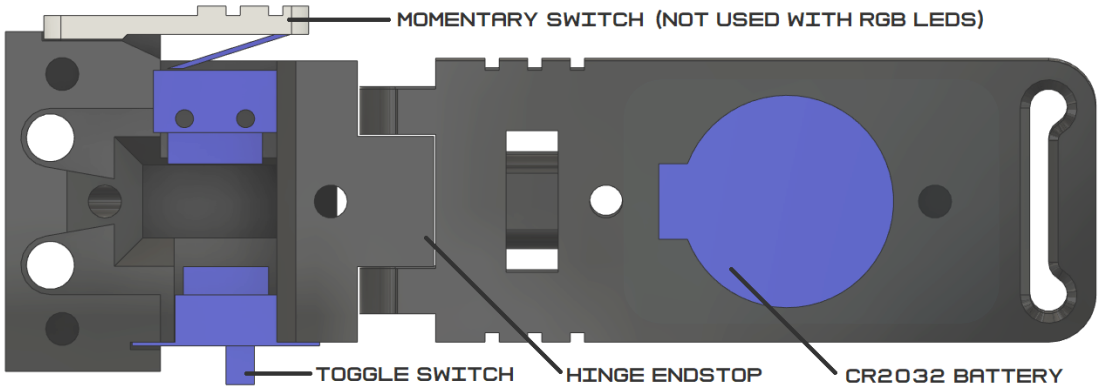
VISOR QUICK GUIDE

Thank you for your purchase! Here are a few things you should know. Get more info and some instructional videos at: **https://www.starsidearmory.com/visor-manual**



Open/Close:

- Open: Unfolding the arms will release the elastic cord tucked between them.
- Close: Fold arms, wrap elastic over the top, and tuck elastic between arms.

Fitment:

- If the padding is not reaching your face, consider affixing rolled fabric in the nose and/or forehead padding area with zip ties. See video for more.
- The elastic cord can be tightened by moving the knots. If you need it to be loosened, consider splicing in additional cordage.

Battery / Panel / Lens Swaps:

- Removing the M3x6mm screws throughout the visor requires a metric hex wrench.
- The CR2032 batteries are located under the panel in each folding arm.
- The front and side panels can be swapped and flipped into a few configurations.
- Lenses are easily removed by pushing on each end from inside the visor.

Misc:

- Each pair of RGB LEDs on a single channel change colors slightly out of sync with each other. The longer you leave the channel turned on, the more they become de-synced and the more interesting the color combinations become.
- **BE CAREFUL! Vision is impaired! Epilepsy hazard! Not meant for prolonged use!**

I'm always working on new sci-fi gear! If you like this kind of stuff, follow @starside_armory on Instagram for updates. Thanks again for your support, I couldn't do this without you!

See you starside,
